

The NETGEAR Stackable Gigabit Managed Switches, the GSM7328S and GSM7352S allow the most flexible and easy-to-deploy Gigabit infrastructure. All 24 and 48 ports of 10/100/1000 Mbps interfaces deliver maximum throughput and low latency. Four (SFP) Gigabit interfaces provide optional fiber connectivity for longer reach Gigabit Ethernet requirements. Two built-in 10 Gigabit Ethernet SFP+ interfaces on the front, and two 10 Gigabit module bays on the rear, permitting both uplinks and local/distant stacking, provide versatile 10 Gigabit deployment possibilities.

Enterprise-class L3

Combining superior resiliency, enterprise-class security and non-blocking performance, the NETGEAR Stackable Gigabit Managed Switches, the GSM7328S and GSM7352S offer IPv4/IPv6 dynamic routing protocols such as OSPF, VRRP and multicast for converged applications with unsurpassed affordability. Together with VLANs routing, voice-class prioritization, and chassis-like stack with Layer 2 + PoE GSM7228PS / GSM7252PS or high-density fiber L3 GSM7328FS, the GSM7328S and GSM7352S series can be deployed at the enterprise edge, remote branch offices and closer to the core of small and medium-sized businesses' growing networks.

High Availability

The NETGEAR Stackable Gigabit Managed Switches, the GSM7328S and GSM7352S come with a removable power module for the main power supply. In the event of a power supply failure, the switch can immediately shift to an external RPS device while the internal power module is replaced for 100% uptime. Like all NETGEAR ProSafe Managed Switches, the GSM7328S and GSM7352S are backed by the NETGEAR ProSafe Lifetime Warranty.

Features at a Glance

GSM7328S

GSM7352S

Hardware Main Features	Benefits
24/48-port Gigabit 10/100/1000	- Gigabit performance for growing networks - Ultra low latency for top of rack applications
4 shared SFP (Gigabit fiber) interfaces	- Fiber SX/LX connectivity for longer reach requirements - Accept Fast Ethernet 100FX SFP
2 built-in 10 Gigabit SFP+ (front)	- Dramatically lower the cost of 10 Gigabit deployments - Flexible 10 GE network uplinks, server/storage - Accept short direct-attach SFP+ copper cables - Support hardware-based stacking
2 additional 10 Gigabit module bays (rear)	For stacking or other 10 GE network uplinks
Physical stacking up to 8 switches/384 ports	- Chassis-like unique GUI/CLI - High speed 12 x 4 = 48 GE overall stacking performance - Single IP address management - Hot swappable, automatic unit replacement - Distributed redundant trunking, any-to-any port mirroring
Stack with PoE GSM72xxPS series Stack with fiber GSM7328FS	Versatile local or distant L3 10 Gigabit deployments with GSM7228PS, GSM7252PS, and GSM7328FS
Removable power supply + RPS option	100% uptime even in case of power supply failure - APS135W power supply can be replaced without any service interruption when used with one external RPS
Software Main Features	Benefits
Layer 3 - IPv4 (RIPv1/v2, OSPFv1/v2, VRRP) Layer 3 - IPv6 (OSPFv3)	- Advanced routing capabilities for converged applications - Ideal for IPv4 / IPv6 transitioning networks
Multiple STP, 802.3ad LACP, RPS support	Superior resiliency for highly available network
Fabric (24/48-port) 144 / 192 Gbps Performance 107.1 / 142.8 Mpps	- Non-blocking performance for critical applications - Ideal aggregation for small core enterprise networks
IPv4 L2, L3, L4 ACL (access control lists) IPv6 L2, L3, L4 ACL (access control lists)	- Enterprise-class security - Network protection based on user profile - Network protection based on trusted application
IPv4 L2, L3, L4 QoS (8 priority queues, DiffServ) IPv6 L2, L3, L4 QoS (8 priority queues, DiffServ)	- Voice-class prioritization - Traffic prioritization based on user profile or application - More queues for VoIP, video & critical applications
Multicast L2 – IPv4 (IGMP snooping v2,v3) Multicast L2 - IPv6 (MLD) IGMP proxy, IGMP querier Multicast L3 – IPv4/IPv6 multicast routing	- Advanced routing of multicast streams (PIM, sparse, dense) - Simplify IPTV & video large deployments - Multicast traffic reaches only the interested receivers
8,000 MAC – 1,024 VLANs – 1,024 MC groups 64 trunks 8-port each – DHCP server/relay 224 IP routes – 128 IP interfaces	Deployable at enterprise edge, remote branch offices or closer to the core of SMB networks

Target Applications

Unified PoE and Non-PoE Edge in Large Networks

GSM73xxS/GSM72xxPS Stack for Access

Stacking with L2+ Gigabit PoE GSM7228PS, GSM7252PS and L3 Fiber GSM7328FS Managed Switches, the GSM7328S and GSM7352S are easily deployed at the edge of enterprise networks for converged applications: LAN telephony, wireless access points or IP cameras. Built-in 10 Gigabit SFP+ ports on the front authorize high-performance distributed trunks to the core and management is simplified. In this configuration, each stack acts a single IPv4/IPv6 routing switch, with only one GUI/CLI and multiple distributed link aggregations.

SMB Network Deployments

GSM73xxS/GSM72xxPS Unique Stack

With GSM7228PS, GSM7252PS and GSM7328FS Managed Switches, the GSM7328S and GSM7352S simplify and lower the cost of medium-sized 10 Gigabit deployments. In this configuration, 8 stacked Switches build a 384 Gigabit ports network with 16 10 Gigabit ports available for servers and high-end storage. The hardware stacking dual-ring topology provides one unique CLI/GUI platform, simple management, network and perfect server/storage resiliency, as well as intelligent load balancing.

NETGEAR Hardware Stacking

Local and Distant Stack Topology

Local Stack Topology

When the switches are deployed in the same rack, one AX742 kit per switch is required for dual-ring topology, providing higher resiliency and intelligent load balancing.

Each ring speed is 12 Gbps half duplex (24 Gbps full duplex).

Dual ring overall speed is 24 Gbps half duplex (48 Gbps full duplex).

AX742 24 Gbps Stacking Kit

- Each AX742 kit contains 2 stacking modules+ 1 stacking cable
- One AX742 kit per switch recommended for full 48 Gbps bandwidth and complete redundancy

Distant Stack Topology

When the switches are deployed in several locations, two AX743 SFP+ host modules are required per switch, with the SFP+ optics (AXM761, AXM762 or AXM763) for this hardware dual-ring topology, providing highest resiliency and intelligent load balancing.

Each ring speed is 10 Gbps half duplex (20 Gbps full duplex).

Dual ring overall speed is 20 Gbps half duplex (40 Gbps full duplex).

Local and distant stack can be combined for maximum flexibility (example: "SMB Network Deployments" application, Page 3).

Built-in SFP+ and Fiber Stacking Note

AX743 and rear module bays are preferred for fiber stacking - rear bays are pre-configured for automatic Stacking mode. Just interconnect switches using rear module bays for zero-touch local and/or distant stacking.

Starting with v8.0.3 software release, the two built-in SFP+ ports on the front may also be used for stacking, although they are pre-configured for regular Ethernet mode. Configuration can be changed to enable front Stacking mode.

AX743 SFP+ Host Module

AXM761, AXM762 or AXM763 SFP+ 10GBase-SR, LR or LRM optics

- AX743 + AXM761/AXM762/AXM763 optics in each rear slot
- Two SFP+ modules are recommended for full 40 Gbps bandwidth and complete redundancy

NETGEAR Hardware Stacking

Features	Benefits
Single IP address management	- Stack up to 8 switches as a single “chassis” logical unit - One GUI and one CLI managing the whole stack - The stack acts as a single switch in the network - The other switches in the network also see the stack as a single switch - Growth is easy, adding a switch to the stack is as simple as connecting the new unit to the stack (configuration is instantly updated)
Bi-directional architecture 48 Gigabit local stacking capacity per switch using AX742 stacking kit 40 Gigabit distant stacking capacity using AX743 + AXM761/AXM762/AXM763 (SFP+ optics)	- Higher stacking throughput capacity with lower latency and jitter for VoIP and video traffic - Each switch in the stack understands the shortest path to forward traffic, bi-directionally both up and down - Vertical/local stacking and horizontal/distant stacking can be mixed for convenient 10 Gigabit deployments (core, distribution layer, edge)
Stack resiliency Automatic unit replacement (AUR)	- Dual ring architecture ensures that if a switch fails within the stack all the other switches can still communicate with one another - Adding a new switch to the stack or replacing a failed unit requires no service interruption, the configuration file is pushed automatically by the stack
Distributed trunking across the stack (link aggregation groups, LACP)	- Increased performance with distributed trunks to the core - Greater redundancy using trunking as several switches are connected to the trunk (up to 8 ports per trunk – 64 trunks are allowed)
Many-to-one port mirroring across the stack	- More flexibility for device troubleshooting - As for a chassis, port mirroring is available from every port to every port across the stack
VLANs automatic propagation across the stack	- As for a chassis, VLAN port tagging or private groups are available everywhere across the stack as for a single switch (Unit 1, Port 2; Unit 2, Port 3, etc.) - No configuration required for the VLAN propagation between the switches
Flexible stacking with PoE or fiber switches	- Stacking with GSM7228PS/GSM7252PS/GSM7328FS - Mixing PoE and non-PoE ports into a single logical unit - Versatile deployment options

Stacking with GSM7228PS/GSM7252PS Note

Stackable, PoE L2+ Managed Gigabit Switches GSM7228PS and GSM7252PS are flexible enough to integrate GSM73xxS stack configurations in full Layer 3 mode without L3 License Upgrade.

When integrating a GSM73xxS stack, the GSM7228PS/GSM7352PS will benefit from the Layer 3 stack full feature set, as slaves within the stack.

Only the stack master determines the stack configuration/feature set. If the stack master is a GSM73xxS then the entire stack profits from the master L3 configuration.

Without Layer 3 license upgrade, if a GSM7228PS/GSM7252PS becomes the master, then the entire stack will downgrade to Layer 2+ feature set. Unless Layer 2+ is the preferred feature set, it is advised to determine in advance which other Layer 3 GSM73xxS slave would become the stack master in case of the stack master failure, by specifying the secondary stack master settings in the stack configuration.

With a Layer 3 license upgrade, a GSM7228PS/GSM7252PS can become the master and handle the full stack L3 configuration.

Associated Modules and Optics

SFPs (optics)

AXM761/AXM762/AXM763 10Gigabit SFP+ GBIC

- 10 Gigabit Ethernet fiber connectivity - LC duplex connector
- Fits into the two built-in 10 GE SFP+ interfaces (front) or AX743 (rear bays)
- 5-year warranty
- AXM761 10GBase-SR "short-reach multimode"
 - 50/125μm OM3 multimode: up to 300m
 - 62.5/125μm OM1 multimode: up to 33m
 - Ordering part number: AXM761-10000S
- AXM763 10GBase-LRM "long reach multimode" (802.3aq)
 - 62.5/125μm OM1 multimode: up to 220m
 - 50/125μm OM3 multimode: up to 260m
 - Ordering part number: AXM763-10000S
- AXM762 10GBase-LR "long-reach single mode"
 - 9/125μm SMF single mode: up to 10 km
 - Ordering part number: AXM762-10000S

AGM731F / AGM732F Gigabit SFP GBIC

- Gigabit Ethernet fiber connectivity - LC duplex connector
- Fits into the four shared SFP interfaces (front)
- 5-year warranty
- AGM731F 1000SX "short reach multimode"
 - 50/125μm OM3 multimode: up to 550m
 - 62.5/125μm OM1 multimode: up to 275m
 - Ordering part number: AGM731F
- AGM732F 1000LX "long reach single or multimode"
 - 50/125μm or 62.5/125μm multimode: up to 550m
 - 9/125μm SMF single mode: up to 10 km
 - Ordering part number: AGM732F

AFM735 Fast Ethernet SFP GBIC

- Fast Ethernet connectivity - LC duplex connector
- Fits into the four shared SFP interfaces (front)
- 5-year warranty
- AFM735 100BaseFX IEEE 802.3
 - 50/125μm or 62.5/125μm multimode: up to 2km
 - Ordering part number: AFM735-1000S

Modules for the Rear Bays

AX742 ProSafe 24Gigabit Stacking Kit

- Each kit contains two stacking modules and one stacking cable
- Each module speed is 12 Gbps (half duplex)/24 Gbps (full duplex)
- Configured in a resilient ring topology, delivers 48 Gbps of stacking bandwidth
- One kit per switch recommended for full bandwidth and redundancy
- 5-year warranty
- Ordering part number: AX742

AX743 ProSafe 10Gigabit SFP+ adapter module

- Interoperates with SFP+ optics GBICs such as AXM761/AXM762/AXM763
- Also interoperates with standard direct attach SFP+ cables (short copper cables with "SFP+ like" connectors)
- 5-year warranty
- Ordering part number: AX743-10000S

See 10Gigabit XFP Note on the following page

Associated Modules and Optics

Modules for the Rear Bays

AX744 ProSafe 10Gigabit CX4 module

- Adds 10 Gigabit Ethernet “InfiniBand” CX4 connectivity
- Fully compliant with CX4 10-GbE (IEEE 802.3ak Type 10Gbase-CX4) standard
- 1 port CX4 to accommodate standard 10 Gigabit CX4 copper cables
- 5-year warranty
- Ordering part number: AX744-10000S

10Gigabit XFP Note

The previous 10Gigabit XFP modules are compatible with GSM7328S and GSM7352S. XFP Host Module AX741 and XFP Optics AXM751/AXM752 (10GBase-SR/LR) can equip the rear bays. XFP optics are interoperable with newer SFP+ optics: for instance, an XFP-equipped switch can connect with another SFP+-equipped switch, this is the same 10GBaseSR/LR standard and the same fiber. Only the module form factors are different.

SFP+ and XFP Direct Attach Cables

AXC761, AXC763, AXC753 Direct Attach Cables

- Direct Attach copper cable (10GSFP+Cu)
- Drives 10 Gigabit Ethernet
- 5-year Warranty
- Ordering part number:
 - SFP+ to SFP+ (1m version) AXC761-10000S
 - SFP+ to SFP+ (3m version) AXC763-10000S
 - SFP+ to XFP (3m version) AXC753-10000S

Modular Power Supply

APS135W ProSafe Auxiliary Power Supply

- Provides a replaceable power supply
- When an RPS (redundant power supply) is used, the power supply can be replaced without stopping the switch or requiring a reboot (hot swap)
- 5-year warranty
- Ordering part number: APS135W-10000S

RPS5412 Optimal Power® External Redundant Power Supply

- Optimal Power® RPS unit certified by NETGEAR
- Includes the DC power cable for the Switch RPS connector (rear)
- Provides seamless redundant power to the Switch
- 3-year warranty
- Ordering part number:
 - RPS5412-100NAS (Americas)
 - RPS5412-100EUS (Europe)
 - RPS5412-100AJS (Asia)

GSM7328S

GSM7352S

TECHNICAL SPECIFICATIONS	
PHYSICAL INTERFACES	
Front • 24 auto-sensing RJ45 10/100/1000 ports • 4 shared SFP ports for Gigabit fiber uplinks (shared with the last 4 RJ45 ports) • 2 independent 10 Gigabit SFP+ ports • USB port (config/firmware files storage) Rear • 2 additional 10 Gigabit I/O module bays • Serial RS-232 port for console Total • 24 x Gigabit ports + 4 x 10 Gigabit ports	Front • 48 auto-sensing RJ45 10/100/1000 ports • 4 shared SFP ports for Gigabit fiber uplinks (shared with the last 4 RJ45 ports) • 2 independent 10 Gigabit SFP+ ports • USB port (config/firmware files storage) Rear • 2 additional 10 Gigabit I/O module bays • Serial RS-232 port for console Total • 48 x Gigabit ports + 4 x 10 Gigabit ports
PROCESSOR / MEMORY	
• Processor: MPC8633 @ 666 MHz • System memory: 256 MB (RAM) • Packet buffer memory: 6 Mb per switch • Code storage (flash): 32 MB	• Processor: MPC8633 @ 666 MHz • System memory: 256 MB (RAM) • Packet buffer memory: 12 Mb per switch • Code storage (flash): 32 MB
HARDWARE STACKING	
• GSM7352S • GSM7228PS/GSM7252PS • GSM7328FS • Previous GSM7328Sv1/GSM7352Sv1 • Stack height 8 switches/384 ports	• GSM7328S • GSM7228PS/GSM7252PS • GSM7328FS • Previous GSM7328Sv1/GSM7352Sv1 • Stack height 8 switches/384 ports
PERFORMANCE SUMMARY	
• Switching fabric: 144 Gbps • Throughput: 107.1 Mpps • Forwarding mode: Store-and-forward • Latency (64-byte frames, 10 to 100 Mbps): <35.2µs • Latency (64-byte frames, 1 Gbps): <4.1µs • Latency (64-byte frames, 10 Gbps): <2.0µs • Addressing: 48-bit MAC address • Address database size: 8,000 MAC addresses • Number of VLANs: 1,024 (IEEE 802.1Q) simultaneously out of 4,096 VLAN IDs • Number of multicast groups filtered: 1,024 • Number of trunks: 64 trunks, 8-port per trunk • Number of hardware queues for QoS: 8 • Number of static routes: 224 • Number of IP interfaces: 128 • Jumbo frame support: up to 9K packet size • Acoustic noise (ANSI-S10.12): 44 dB @ 25°C ambient temperature • Heat dissipation: 260.49 Btu/hr • Mean time between failures (MTBF): 211,069 hours (~24.1 years) @ 25 °C and 98,705 hours (~11.3 years) @ 55 °C ambient temperature	• Switching fabric: 192 Gbps • Throughput: 142.8 Mpps • Forwarding mode: Store-and-forward • Latency (64-byte frames, 10 to 100 Mbps): <35.5µs • Latency (64-byte frames, 1 Gbps): <4.1µs • Latency (64-byte frames, 10 Gbps): <2.0µs • Addressing: 48-bit MAC address • Address database size: 8,000 MAC addresses • Number of VLANs: 1,024 (IEEE 802.1Q) simultaneously out of 4,096 VLAN IDs • Number of multicast groups filtered: 1,024 • Number of trunks: 64 trunks, 8-port per trunk • Number of hardware queues for QoS: 8 • Number of static routes: 224 • Number of IP interfaces: 128 • Jumbo frame support: up to 9K packet size • Acoustic noise (ANSI-S10.12): 44 dB @ 25°C ambient temperature • Heat dissipation: 389.20 Btu/hr • Mean time between failures (MTBF): 169,522 hours (~19.4 years) @ 25 °C and 83,550 hours (~9.5 years) @ 55 °C ambient temperature
L3 SERVICES – ROUTING	
• L2+ static routing (subnets, VLANs) • 224 IP routes (L3-capable hardware) • 128 IP interfaces (L3-capable hardware) • IP Source Guard • L3 IPv4/IPv6 unicast dynamic routing • RIP v1/v2 (IPv4) • OSPF v2/v3 (IPv4) • OSPFv3 (IPv6) • OSPF equal-cost multi-path (4 - ECMP routes) • VRRP 64 instances (IPv4) • IPv6 tunnel support • ICMPv6	• L2+ static routing (subnets, VLANs) • 224 IP routes (L3-capable hardware) • 128 IP interfaces (L3-capable hardware) • IP Source Guard • L3 IPv4/IPv6 unicast dynamic routing • RIP v1/v2 (IPv4) • OSPF v2/v3 (IPv4) • OSPFv3 (IPv6) • OSPF equal-cost multi-path (4 - ECMP routes) • VRRP 64 instances (IPv4) • IPv6 tunnel support • ICMPv6

**GSM7328S****GSM7352S**

L3 SERVICES - DHCP	
- IPv4 DHCP server (1,024 clients) - IPv4 DHCP L2 relay, DHCP snooping - IPv6 DHCP server (1,024 clients) - IPv6 DHCP/BOOTP relay - IPv6 DHCP snooping - DNSv6 support	- IPv4 DHCP server (1,024 clients) - IPv4 DHCP L2 relay, DHCP snooping - IPv6 DHCP server (1,024 clients) - IPv6 DHCP/BOOTP relay - IPv6 DHCP snooping - DNSv6 support
L3 SERVICES - MULTICAST	
- IGMP querier - IPv4/IPv6 multicast streams routing between VLANs, subnets or different networks - IPv4/IPv6 PIM-SM (sparse mode) - IPv4/IPv6 PIM-DM (dense mode) - Distance Vector Multicast Routing Protocol (DVMRP) - Neighbor discovery	- IGMP querier - IPv4/IPv6 multicast streams routing between VLANs, subnets or different networks - IPv4/IPv6 PIM-SM (sparse mode) - IPv4/IPv6 PIM-DM (dense mode) - Distance Vector Multicast Routing Protocol (DVMRP) - Neighbor discovery
L2 SERVICES - SWITCHING	
- MAC Address table: 8,000 - ARP cache size: 1,664 - Proxy ARP, Dynamic ARP Inspection	- MAC Address table: 8,000 - ARP cache size: 1,664 - Proxy ARP, Dynamic ARP Inspection
L2 SERVICES - VLANs	
- IEEE 802.1Q static VLAN (up to 1,024 VLANs out of 4,096 VLAN IDs) - IEEE 802.1v Protocol VLAN - Port-based VLAN - MAC-based VLAN - IP subnet-based VLAN - Protocol-based VLAN - Voice VLAN (based on IP phones OUIs) - Guest VLAN with IEEE 802.1x - Auto VLAN Assignment via RADIUS - IEEE 802.1 Q-in-Q (Double-VLAN tagging) - GARP with GVRP/GMRP (automatic registration for membership in VLANs or in multicast groups) - Private VLAN groups	- IEEE 802.1Q static VLAN (up to 1,024 VLANs out of 4,096 VLAN IDs) - IEEE 802.1v Protocol VLAN - Port-based VLAN - MAC-based VLAN - IP subnet-based VLAN - Protocol-based VLAN - Voice VLAN (based on IP phones OUIs) - Guest VLAN with IEEE 802.1x - Auto VLAN assignment via RADIUS - IEEE 802.1 Q-in-Q (double-VLAN tagging) - GARP with GVRP/GMRP (automatic registration for membership in VLANs or in multicast groups) - Private VLAN groups
L2 SERVICES - AVAILABILITY	
- IEEE 802.3ad Link Aggregation (Static or LACP) up to 64 trunks per stack and up to 8 ports per trunk - User selectable LAG hashing algorithm - IEEE 802.1D Spanning Tree Protocol - IEEE 802.1w Rapid Spanning Tree - IEEE 802.1s Multiple Spanning Tree	- IEEE 802.3ad Link Aggregation (Static or LACP) up to 64 trunks per stack and up to 8 ports per trunk - User selectable LAG hashing algorithm - IEEE 802.1D Spanning Tree Protocol - IEEE 802.1w Rapid Spanning Tree - IEEE 802.1s Multiple Spanning Tree
L2 SERVICES - MULTICAST	
- IGMP v1, v2, v3 snooping support - IGMP querier mode support - Static multicast filtering (1,024 Multicast groups) - IPv6: MLD v1, v2 snooping support - MLD proxy	- IGMP v1, v2, v3 snooping support - IGMP querier mode support - Static multicast filtering (1,024 Multicast groups) - IPv6: MLD v1, v2 snooping support - MLD proxy
L2/L3/L4 SERVICES - QoS	
- IPv4 / IPv6 L2/L3/L4 QoS: MAC, IP, TCP/UDP ports - IEEE 802.1p Class of Service (CoS) - DiffServ QoS (RFC 2998) - Weighted round robin (WRR) queue technology - Strict priority queue technology - Ingress rate limit in 1 Kbps increments - Egress traffic shaping	- IPv4 / IPv6 L2/L3/L4 QoS: MAC, IP, TCP/UDP ports - IEEE 802.1p Class of Service (CoS) - DiffServ QoS (RFC 2998) - Weighted round robin (WRR) queue technology - Strict priority queue technology - Ingress rate limit in 1 Kbps increments - Egress traffic shaping

**GSM7328S****GSM7352S****L2/L3/L4 SERVICES – SECURITY**

- IPv4 / IPv6 access control lists (ACL) L2/L3/L4: MAC, IP, TCP
- MAC-based source/destination ACL
- IP subnet-based source/destination ACL
- Protocol-based source/destination ACL
- ACL over VLAN
- Dynamic ACLs
- 1,024 ACLs
- Network storm protection including broadcast multicast and unicast traffic
- DoS
- Protected ports
- Port locking
- MAC filtering
- Port security
- DHCP snooping
- IP Source Guard
- Dynamic ARP inspection
- RADIUS (RFC 2865)
- RADIUS accounting (RFC 2866)
- IEEE 802.1x port access authentication (RADIUS)
- Network access control: Captive portal with internal authentication or external RADIUS authentication
- Possible configuration of 10 captive portals
- TACACS+

- IPv4 / IPv6 access control lists (ACL) L2/L3/L4: MAC, IP, TCP
- MAC-based source/destination ACL
- IP subnet-based source/destination ACL
- Protocol-based source/destination ACL
- ACL over VLAN
- Dynamic ACLs
- 1,024 ACLs
- Network storm protection including broadcast multicast and unicast traffic
- DoS
- Protected ports
- Port locking
- MAC filtering
- Port security
- DHCP snooping
- IP Source Guard
- Dynamic ARP inspection
- RADIUS (RFC 2865)
- RADIUS accounting (RFC 2866)
- IEEE 802.1x port access authentication (RADIUS)
- Network access control: Captive portal with internal authentication or external RADIUS authentication
- Possible configuration of 10 captive portals
- TACACS+
